

# Stem & Progenitor Cell Interest Group

Wednesday, February 8, 2017

## **Guoqiang Gu, Ph.D.**

Associate Professor of Cell and Developmental Biology

**"Exploring how progenitor cell heterogeneity regulates alpha and beta cell development in the pancreas"**

The Gu laboratory examines the molecular mechanisms directing the production of functional beta cells in the pancreas. Dr. Gu will discuss whether/how cell-cell communication and epigenetic events select a particular subset of pancreatic progenitor cells to defined islet cell types.

9:00 am – 9455 MRB IV
