Data Visualization

Communicate information clearly and efficiently via information graphics, making complex data understandable.

An objective of data visualization is to communicate information clearly and efficiently to users via the information graphics selected, such as a table or chart. Effective visualization helps users analyze and interpret the represented data and evidence. It makes complex data more accessible, understandable and usable.

We can produce visualization media in various formats, as is necessary for your needs. Examples include:

- Illustration / figure
- Animation / video
- Interactive / web

The Data Visualization Service consists of expert consultation with you to:

1. Understand your goals at communicating the data in question,
2. Refine the data to allow it to be consumed for visualization, and
3. Identify and implement visualization techniques and tools to output a static and/or interactive visual object.

Examples

Collaborative Networks / Social Graphs

Interactive Gene Networks

Use Case
High-throughput functional genomics experiments (microarray, RNA-Seq, ChIP-Seq) have illuminated millions of gene-gene relationships and interactions. The BCBC has warehoused all of this data, but needed an interactive tool to allow scientists to interactively browse through this data in a localized manner. We constructed a local gene network visualization tool that met the needs of the scientists and bioinformaticians.

Data
Millions of records described entities (such as genes) and the relationships between these, including data provenance, type of relationship, directionality and more.

Technology used:
Flash/Flare API, Javascript, HTML5, PHP, PostgreSQL

Static Image

URL
Pancreatic bud formation: Mnx1, Pdx1, Ptf1a, Nkx6-1, Nkx2-2, Cpa1, Myc, Pbx1, Slc2a2

Multi-Resolution Microscopy Image Viewer

Use Case
A high-content imaging project (Al Powers, Vanderbilt University) required the development of web tools to allow for the annotation and viewing of large-scale and 3D microscopy imagery.

Data
Microscopy data in the form of LSM, AFI and SVS files

Technology used:
Google Maps API (version 2 and 3), PostgreSQL, PHP, HTML5

Media Type
Interactive / Web

Microscopy 3D Image Viewer

Use Case
A high-content imaging project (Al Powers, Vanderbilt University) required the development of web tools to allow for the annotation and viewing of large-scale and 3D microscopy imagery.

Data
Microscopy data in the form of LSM, AFI and SVS files

Technology used:
HTML5, Javascript

Media Type
Interactive / Web
Service Fees

Hourly rates apply.

Estimates to be provided following consultation.
