Type 1 and Type 2 Diabetes Drug Study

The purpose of this study is to compare commonly used diabetes medications in relation to glycemia-lowering effectiveness in diabetes patients.

To qualify to participate:

- Be 30 years of age or older
- Men or women diagnosed with diabetes at age ≥ 30 years (≥ 20 for American Indians)
- Duration of diagnosed diabetes < 10 years
- Willingness to administer daily subcutaneous injections, take a second diabetes drug after randomization, potentially initiate insulin and intensify insulin therapy if study metabolic goals are not met, perform self-monitoring of blood glucose
- Fluent in either English or Spanish
- A negative pregnancy test for all females of childbearing potential (i.e. pre-menopausal, and not surgically sterile)

How to Participate

To participate, contact Stephanie Martin at (615) 936-1075 or e-mail at stephanie.michon@vanderbilt.edu.
