

About the VCMR

The Vanderbilt Cryopreserved Mouse Repository (VCMR) contains unique mouse strains that have been derived by Vanderbilt investigators. These strains are available for rederivation by both non-profit and for-profit investigators.

Keywords: [VCMR](#) [cryopreserved](#) [cryopreservation](#) [repository](#)

Expand

Investigators interested in donating a strain to the VCMR should complete the VCMR submission and release forms and return it to VCMR@vanderbilt.edu.

The following factors will be considered prior to accepting strains into the VCMR.

- Is the strain of ongoing value to other researchers?
- Is the strain available at another mouse repository? Exceptions for unique strain backgrounds may be considered.
- Is the strain published and well documented?
- If the strain is unpublished, is there sufficient documentation and evidence that it functions as desired?

Benefits of the Vanderbilt Cryopreserved Mouse Repository:

- Lines are thoroughly annotated and preserved indefinitely
- Enables full and easy compliance with the NIH sharing policy
- Eliminates the need to ship live animals to an external repository
- Eliminates the cost of maintaining your mouse model as live animals
- Eliminates the need for you to personally coordinate their distribution
- Protects against accidental loss, contamination or genetic drift
- Donating investigators are entitled no-fee rederivation*

*Some restrictions apply
