Expand

The Center for Stem Cell Biology is pleased to announce the creation of the Vanderbilt Cryopreserved Mouse Repository (VCMR). We are currently accepting applications from all VU/VUMC investigators to have their cryopreserved lines become part of the VCMR. The lines must be of potential ongoing scientific value, not already present in other repositories, accurately named, and any new genetic component must function as described. Contributing your mice to the VCMR will save you money and assure compliance with NIH Sharing Policies.

VMCR submission and release forms are located at https://labnodes.vanderbilt.edu/resource/view/id/15520/community_id/2613.

A current list of lines available in the VCMR is located at https://labnodes.vanderbilt.edu/resource/view/id/14860/community_id/2613.

For further information, please go to <https://labnodes.vanderbilt.edu/community/profile/id/2613>.

If you have questions please email VCMR@vanderbilt.edu.
