

Advanced cryopreservation and rederivation techniques

We are pleased to announce that we recently adopted new protocols in both cryopreservation and rederivation of mouse sperm. These techniques harmonize two different methods for reproductive technologies from the CARD and Jackson laboratories enabling an increase in the number of samples collected for sperm cryopreservation and improving fertilization efficiencies. [Contact us](#) today to safely cryopreserve your valuable mouse strain to prevent from loss of the line, genetic drift, or contamination.
