An 8 bp, frame-shifting deletion in exon 1 of Zfp329 was generated using CRISPR/Cas. Cas9+ embryos were obtained by crossing C57Bl6/J-Cas9 expressing mice with C57Bl6/N mice and injected with target-specific gRNAs. Donor males were 87.5% C57Bl6/J and 12.5% C57Bl6/N at cryopreservation.
