

Release notes for Version 1.4

Keywords: [release notes](#) [new features](#)

[Expand](#)

We have resolved 71 ticketed tasks, bugs, or improvements. Major issues are outlined below:

- **Resources**

- **Resource Sharing Widget** - We have made significant improvements to the resource sharing widget, which allows searching and filtering to quickly find what community/collection to share to, as well as list which community/collection a resource may already be shared with.
- **Improvements to Resource File Management** - Improvements to the resource-associated file management and viewing should provide an easier mechanism for adding, editing, deleting and viewing such files.
- **Resource Search Includes File Search** - As a first pass, searching resources will match the file name and description of all files associated with the resource. We will be working on a file management interface for a future release.
- **Resource Tags/Keywords** - Improvements to the interface, mainly to do with validation.
- **Mouse Resource Type** - Research applications are now optional, without generating a failure.
- **Document/Pages/Services** - The "Content" field is now optional.

- **Gene Targeting Experiment Tracker** - General improvements and fixes.

- **Freezer Inventory Application** - General improvements (searching, ACL, viewing), fixes and data curation.

- **VUMC Identity/Branding** - For the VUMC Community context, we have added the Vanderbilt Medical Center logo.

- **Email Notifications for Primary Resource Contribution** - We have added back email notification for primary resource contributions. These are dispatched based on the subscription permissions for those users allowed to accept resource contributions.

- **Support Files** - Improvements made for file/document mime types.

- **Collection Profile** - We have simplified the collection profile page to provide quick access to a collection's resources.

- **Subscription permissions** - We have removed from view those permissions that are not currently used, so as to simplify the user interface.

- **Community Member Profile Listings** - In some contexts, the listing of community/workgroup members were not shown.

- **Other improvements**

- Mini-dashboard responds to keyboard entries in Internet Explorer
- Print layout improved (overlapping title and logo)
- Member card now displays primary affiliation
