

Sample Lysis and Preparation

Sample Lysis and Preparation

Expand

The VAPR has the required instrumentation to homogenize, disrupt, or lyse samples from virtually any source (cells, tissue, whole organs, plants, yeast, bacteria, etc.).

This service can be used to isolate DNA, RNA, or make protein lysates.

We can simultaneously handle 1-96 individual samples and offer a very quick turnaround.

Lysis conditions can be completely customized to your needs (temperature, buffers, sample size/volume, etc.).
