

Diabetes Training Programs: Post-Doctoral Fellows

Diabetes Training Programs: Post-Doctoral Fellows

Keywords: [training](#) [postdoc](#)

[Expand](#)

The Vanderbilt DRTC enhances the efforts of two diabetes-related post-doctoral training programs, which is in keeping with the idea that DRTCs promote education and training.

There is limited overlap between these programs. Only a few preceptors are members of both programs and the applicant pools are different. Thus one program mainly supports the research training of Ph.D.s based in basic science departments, and does not support M.D.s, whereas the other program mainly supports the research training of M.D.s and Ph.D.s based in clinical departments.

The two Post-Doctoral Training Programs are:

- **"Research Training in Diabetes and Endocrinology,"** an NRSA postdoctoral grant that provides research training in diabetes, endocrinology and metabolism for four postdoctoral trainees each year.
